

cellular bioenergetics role of pdf

Bioenergetics is a field in biochemistry and cell biology that concerns energy flow through living systems. This is an active area of biological research that includes the study of the transformation of energy in living organisms and the study of thousands of different cellular processes such as cellular respiration and the many other metabolic ...

The ER is a complex, dynamic organelle whose functions include protein folding, Ca²⁺ storage, and lipid and carbohydrate metabolism. Diverse cellular stresses, such as perturbations in Ca²⁺ homeostasis, redox imbalance, altered protein glycosylation, or protein folding defects, cause unfolded or misfolded proteins to accumulate in the ER ...

Studies of cytochrome c from different species indicate that the role of cytochrome c in apoptosis is widespread and common. Cytochrome c is a highly conserved protein and cytochrome c from horse, bovine, rat, pigeon and tuna [1, 34] all could reconstitute the caspase activation in vitro.

Aging is associated with a decline in mitochondrial function and the accumulation of abnormal mitochondria. However, the precise mechanisms by which aging promotes these mitochondrial alterations and the role of the latter in aging are still not fully understood. Mitochondrial dynamics is a key process regulating mitochondrial function and quality.

Cardiomyocytes from human pluripotent stem cells (hPSCs-CMs) could revolutionise biomedicine. Global burden of heart failure will soon reach USD \$90bn, while unexpected cardiotoxicity underlies 28% of drug withdrawals.
