Process engineering focuses on the design, operation, control, optimization and intensification of chemical, physical, and biological processes.

Process engineering - Wikipedia

Historically, the chemical engineer has been primarily concerned with process engineering, which can generally be divided into two complementary areas: chemical reaction engineering and separation processes.

Chemical engineer - Wikipedia

The Department of Chemical Engineering and Biotechnology at Cambridge University is one of the UK's leading research departments, ranking highly in both national and international University league tables. The department's research strategy responds to the global drive for sustainability, addressing the need for novel chemical engineering ...

Chemical Engineering Questions and Answers - Aptitude

By joining Teesside University's chemical engineering degree you will be on a path to full registration as a chartered engineer with one of the highest earning potentials amongst the engineering professions. Chemical engineers take science out of the laboratory and into the real world. They turn raw materials into useful products through ...

Chemical Engineering, BEng (Hons) | Undergraduate study

This four-year programme builds upon the knowledge and experience offered by the Engineering (Chemical) BEng programme with the addition of a final-year research project and advanced modules, and is a direct route to IChemE membership and Chartered (CEng) status.

Engineering (Chemical) MEng | UCL London's Global University

In chemical engineering, process design is the design of processes for desired physical and/or chemical transformation of materials. Process design is central to chemical engineering, and it can be considered to be the summit of that field, bringing together all of the field's components.

The principles of chemical etching explained in nine process steps. We have advanced these principles, setting the standard for accuracy and repeatability.

The Chemical Etching Process: Photo Etching Explained

The chemical industry is growing. By 2035, the market is expected to reach around 6.5 billion dollars, more than double what it is today. Shorter product lifecycles, difficult access to raw materials, and high customer demands pose tremendous challenges for chemical companies.
