Clinical Lab Locations Clinical Laboratory Locations

The false positive rate is the number of false positives divided by the number of total positives, or 1-PPV. The interpretation of positive results should take into account the clinical characteristics of the patient and the prevalence of influenza in the patient population being tested (e.g., level of influenza activity in the community).

Rapid Diagnostic Testing for Influenza: Information for

Since 2003, NIAID has substantially increased its support for food allergy research, from basic research in allergy and immunology to epidemiological and observational studies to identify risk factors and to clinical trials that are testing new strategies to prevent and treat food allergy.

Food Allergy | NIH: National Institute of Allergy and

A bacterial wound culture is a test that detects and identifies bacteria that cause infections in a wound. Any wound may become infected with a variety of bacteria.
